

PROSPECTIVE NATURAL HISTORY STUDY OF VISION LOSS IN USH1C: A MULTICENTER STUDY

A Prospective Natural History Study of Vision Loss in Usher Syndrome Type 1C (USH1C) is being conducted to assist in the development of treatments.

Natural History Studies allow researchers and clinicians to understand disease so that they can develop new ways to diagnose, prevent and determine treatments.

The information collected for this study will include genetic testing, vision testing, as well as questionnaires. Participants will be required to travel (reimbursement provided) and confidentiality will be maintained.

TO PARTICIPATE IN THIS STUDY

Please Contact Dr. Jennifer Lentz at 504-599-0400 or jlentz@lsuhsc.edu.

OPEN TO USH1C PATIENTS
